

# CARD PRINTING HAS NEVER BEEN SO...

## FLEXIBLE, VERSATILE, FRIENDLY, ADVANCED!

Because the Dolphin is more than a printer, it's a new concept: the perfect tool to conquer new markets, thanks to its characteristics. And we want to personally show you all its features.

**FLEXIBLE** The Dolphin is perfect for all those applications requiring an easy to use, and reliable printer with exceptional performance and a reasonable cost for printing small quantities. The Dolphin can print a wide variety of cards with ease: ID cards, gift and loyalty cards, membership cards, hotel room keys, etc. Reliable and efficient, it can print and encode cards in a single pass, as well as personalize pre-printed cards.

**VERSATILE** Text, photos, logos, graphics, barcodes: The Dolphin offers outstanding performance, in both high resolution colors and simple monochrome images! The advanced innovations employed in the printing (color dye sublimation and monochrome printing) ensure that the Dolphin always offer: sharpness, excellent contrast, and color clarity. The new system developed by CIM, with its advanced printhead temperature control, ensures precise and consistent color throughout.

**FRIENDLY** The exclusive Rainbow software bundled with each printer, permits seamless integration with company databases and graphics importation. CIM exclusive One Touch Image Memory Function allows for continuous card printing without requiring card by card data input when running repeat jobs of the last card produced.

**ADVANCED** The Dolphin has evolved from the concept that customer service and after-sales support should go hand in hand. Quality is guaranteed over time. The Dolphin card supplied with each unit, provides free unlimited technical support for a period of 2 years from date of shipment including any problem with hardware, software, or installation.

Meets all printing requirements

CIM technology for printhead temperature control system, and One-Touch Image Memory Function

2 year warranty and technical assistance with the Dolphin Card

User-friendly Rainbow software

## RELIABLE, SIMPLE, EFFICIENT, GREAT VALUE!

The engineering simplicity facilitates technology upgrades such as: encoding options (magnetic stripes and smart chips) or options for USB and/or Ethernet connection.

The advanced printhead temperature control ensures excellent printing quality of images and backgrounds.

Panel complete with connectors: parallel port, serial port, ON/OFF switch, power supply connector, USB and Ethernet ready.

The printhead assembly can be raised for easy ribbon replacement.
